Portotherm

Prioritize buildings for investigation using existing monthly heat data.

Provisional brand. Local synthetic demonstration.

The investigation decision

Which building should we review first?

Monthly records can sit across files, with unclear units, missing periods and limited follow-up.

We will test this workflow problem with Latvian apartment managers.

The first customer hypothesis

20–100 buildings in a professionally managed apartment portfolio.

Buyer: management company decision maker

Daily user: portfolio manager or analyst

Technical reviewer: local energy specialist

A documented review workflow

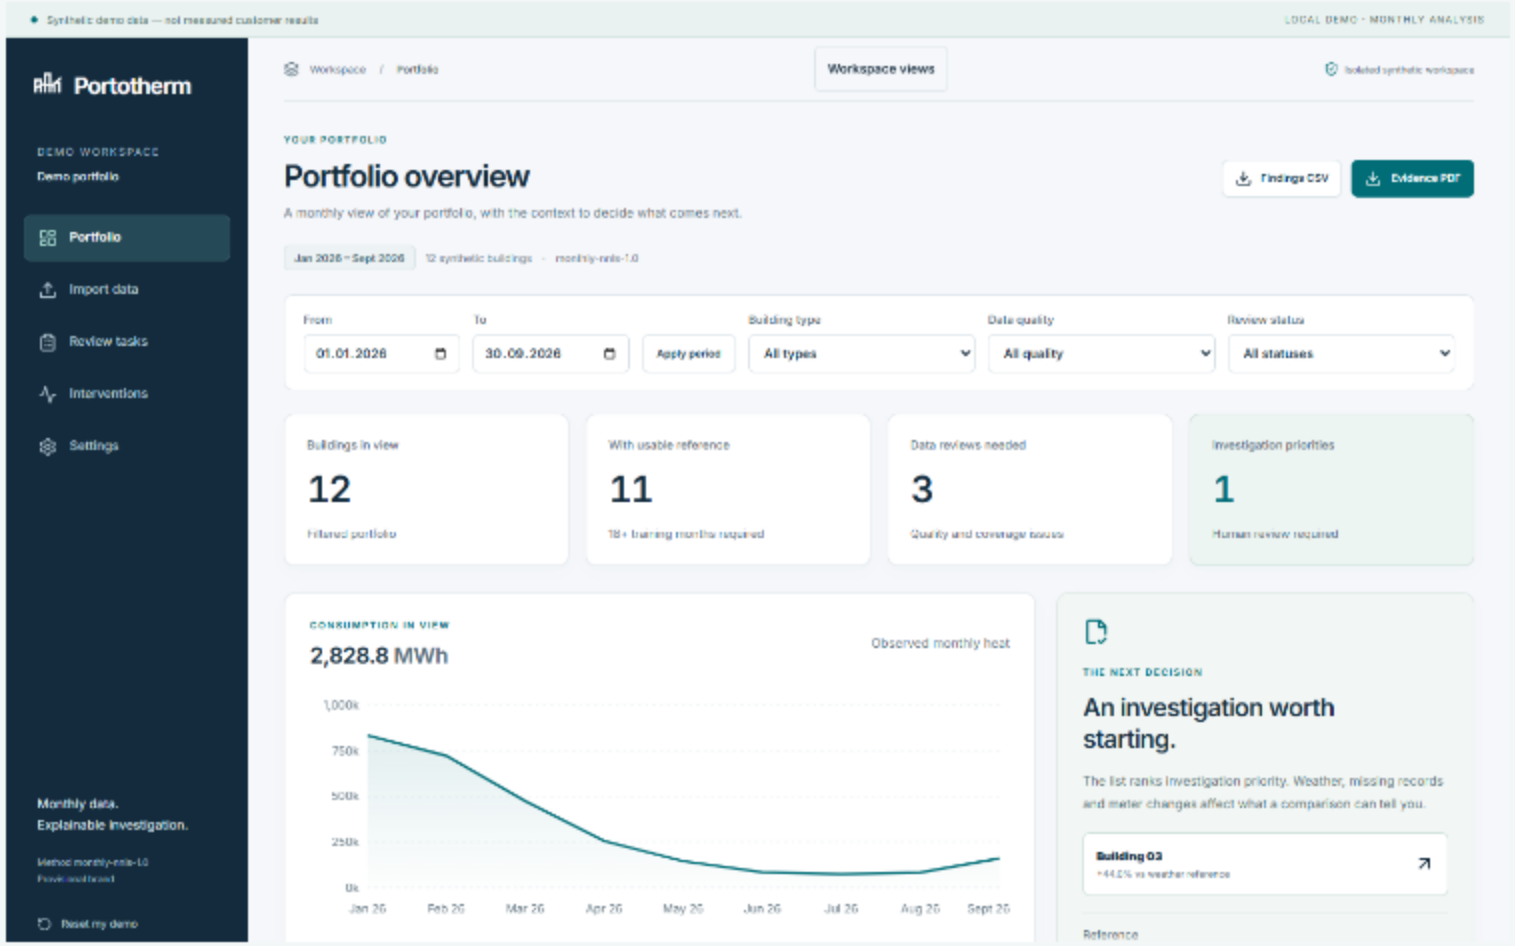

01 Import and validate monthly CSV/XLSX

02 Calculate a weather reference with the engine

03 Review optional Claude explanations and drafts

04 Explicitly approve tasks and track evidence

A working synthetic portfolio

12
synthetic buildings

11
usable references

1
investigation priority

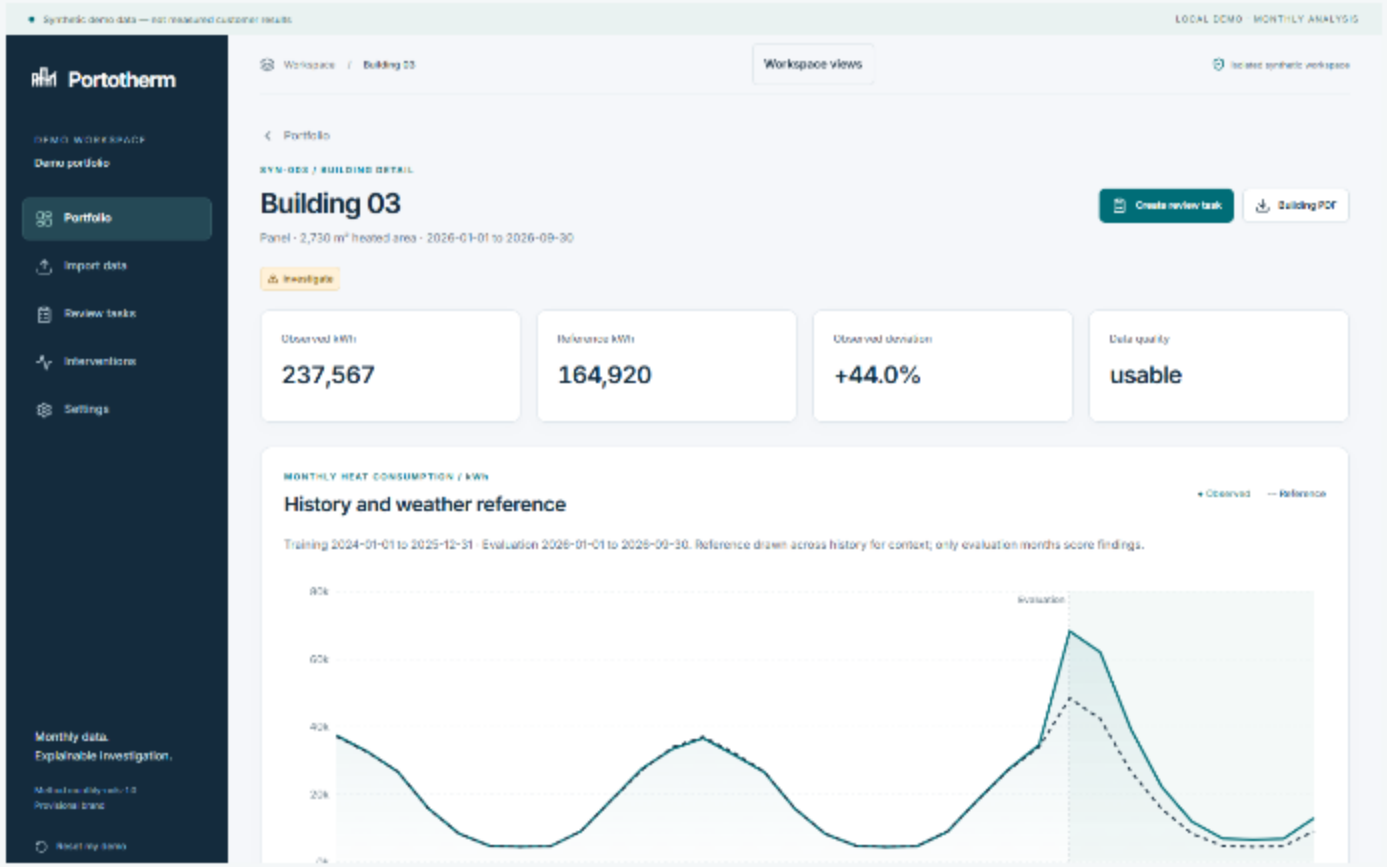

The reason stays visible

Own history + days + heating degree days

Training ends before evaluation begins.

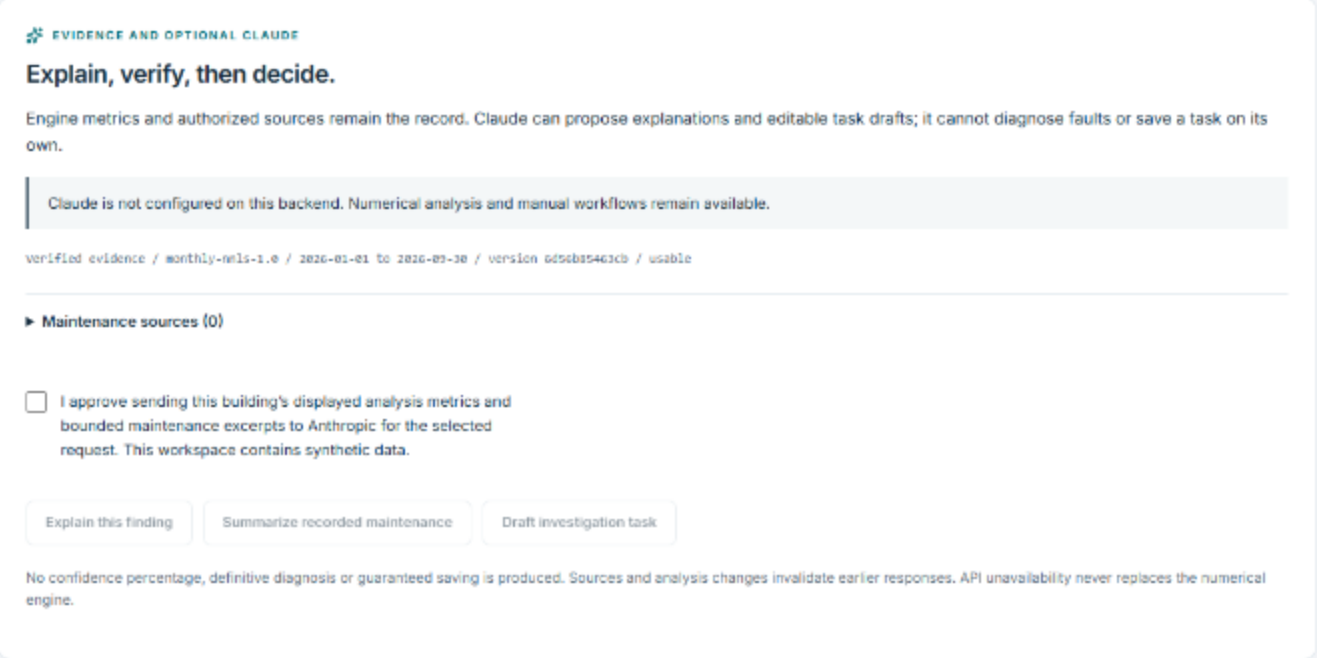

Threshold, persistence, quality and alternative explanations stay visible.

A human decides what to investigate.

OPTIONAL / BACKEND ONLY / USER APPROVED

Claude helps with the review

Suggested column mapping

Evidence-backed explanations

Investigation task drafts

The engine calculates. A person approves.

Actual local synthetic screen; no live API result claimed. Architecture: docs/technical/ai-architecture.md

PROPOSED SCOPE: 5–10 BUILDINGS

A six-week retrospective pilot

Week 1 Scope, permissions and data inventory

Week 2 Import and quality review

Week 3 Historical reference and initial findings

Week 4 Manager and expert feedback

Week 5 Review tasks and intervention records

Week 6 Learnings and continuation decision

A business model to validate

Per-building subscription

Portfolio package

Setup or pilot fee + subscription

Discovery starts with manager interviews and a small authorized pilot.

Price and support costs remain unvalidated.

Demonstrated and still pending

Demonstrated locally

Synthetic engine, imports, evidence reports, source documents and tested consent/approval boundaries.

Pending before a real pilot

Live Claude verification, real weather, identity deployment, data agreements and independent expert review.

Founder details and open roles

Founder biography and confirmed team information have not been supplied.

Needed for a credible pilot:

Local energy specialist

Building manager with authorized data access

Privacy and legal review capacity

The next step with LIAA

Introductions to relevant apartment managers

A local reviewer for technical validation

Guidance on the suitable support route and next action

The consultation is not program acceptance or funding approval.
